Additional value from the specialist

We build production benefits

REBUILDS AND UPGRADING/RETROFIT

We offer innovative ideas to update your equipment to the state of the art.

During the course of the operation time of equipment and components, requirements with regard to the use can change and considerably higher operation costs can occur, especially with regards to older equipment. The rebuild concepts of WUMAG TEXROLL engineering service increase the range of application, decrease operating costs and open up the unused potential of your equipment – and we can achieve this even if your equipment is from a different manufacturer.

WHAT WILL WE DO?

Together, we will analyse, design and engineer all necessary steps of the rebuild.

WE DELIVER

- Replacement of components, where spare parts are not available
- A range of products in terms of function and energy efficiency
- Retrofit or expansion of automation technology
- Custom software
- Documentation, conforming to the law

YOUR BENEFITS

Especially with regards to product cycles becoming constantly shorter, a retrofit of production plants is particularly lucrative. We assume responsibility for the complete mechanical and electrical revision for you. This allows the extension of the service life of your equipment significantly and increases the efficiency, the volume of production and the product quality.

- Existing machines and plants are set to the state of the art
- Complying with legal requirements, such as German Ordinance on Industrial Safety and Health
- Increase in productivity
- Lower costs in relation to a new acquisition
- Existing foundations remain
- Large investment for replacements not necessary

REPAIR-SERVICE

Repair-related downtimes will cost a lot of money. In such cases our technical staff, with many years of experience, will assist you. In addition, we have extensive stock of control and mechanical components as well as a maintenance service.

Our service contracts ensure the regular preventive maintenance of your equipment to maintain high availability.

Whether control technology, mechanics, programming or design – our experts can help. Many errors can be localised and eliminated via remote maintenance. This saves time and money – and avoids difficulties.

YOUR BENEFITS

- Short response times
- Short diagnostic times
- Quick solution through targeted measures and the stocking of spare parts
- Original spare and wear parts
- High plant availability
